PERSONAL PROJECTS

- **Calculator**
I made these project using Html,Css, Javascript
 - Tools & technologies used: Html,Css,Javascript.
 - It was my first project in which I worked.The main reason I choose to make calculator because it can be applied in everyday life. Students often use calculators for math problems and other academic tasks.
- **My portfolio**
I made these project using Html and Css,While making these project I learned and experienced a lot of things.
 - Tools & technologies used: Html,Css.
 - I have worked on many important projects throughout my career. What's really crucial for me when starting one is to get very clear on the goals right at the start and then create a plan with milestones. I also like dealing with the most difficult parts of the projects early on—that way in case there are any significant issues, I'll still have a nice amount of time to complete before the deadline. I also typically break down large tasks into smaller chunks, so that it is easier to know where to start. Detailed planning is very important to ensure an important project goes smoothly.
